

Sullivan **Palatek**[®]

Aftercooler - Filter - Dryer Construction Packages

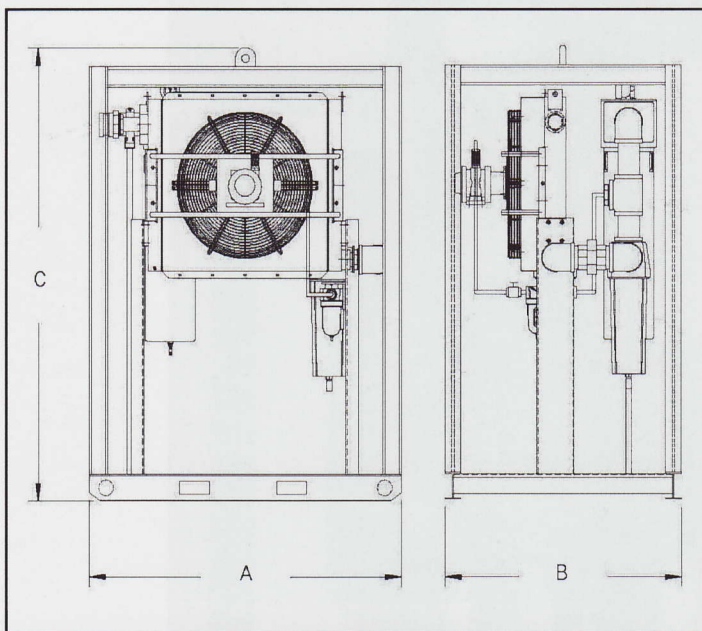

Proven performance with exceptional design

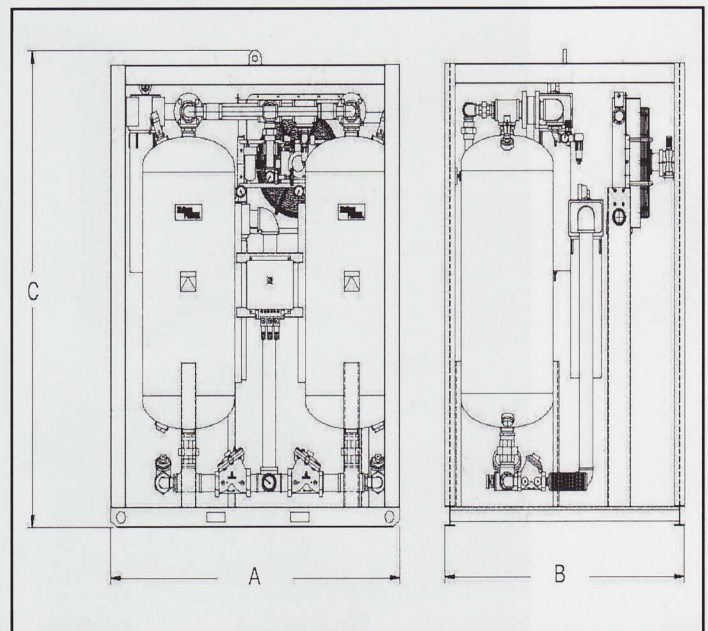

Sullivan Palatek®

The Advantages of owning a Sullivan-Palatek Dryer Skid Package:

Operation of the SPAF-SPS packaged desiccant dryer skid is fully automated with all sequencing and function controlled by an electronic timing module. Wet compressed air discharged from the air compressor enters the Aftercooler where the compressed air temperature is reduced to near ambient. The coalescing prefilter then removes any liquid moisture carryover. The air then enters the regenerative dryer and is reduced to -40°F. Aftercooler fan is available with air or electric motor.

SPAF Series
Aftercooler/Filter Separator

SPS Series
Dryer/Aftercooler/Filter Separator

Sold & Service by:

Model	Length (inches) A	Width (inches) B	Height (inches) C	Weight (pounds)
